

# 1G Fiber Optic Router for Australian Overseas Warehouse

## AI Overview

For a 1G fiber optic connection in an Australian warehouse, routers like MikroTik hAP Ax3, RB5009, Netgear Nighthawk RS700, and Beryl AX are top choices for reliable gigabit performance. Recommended Router Options

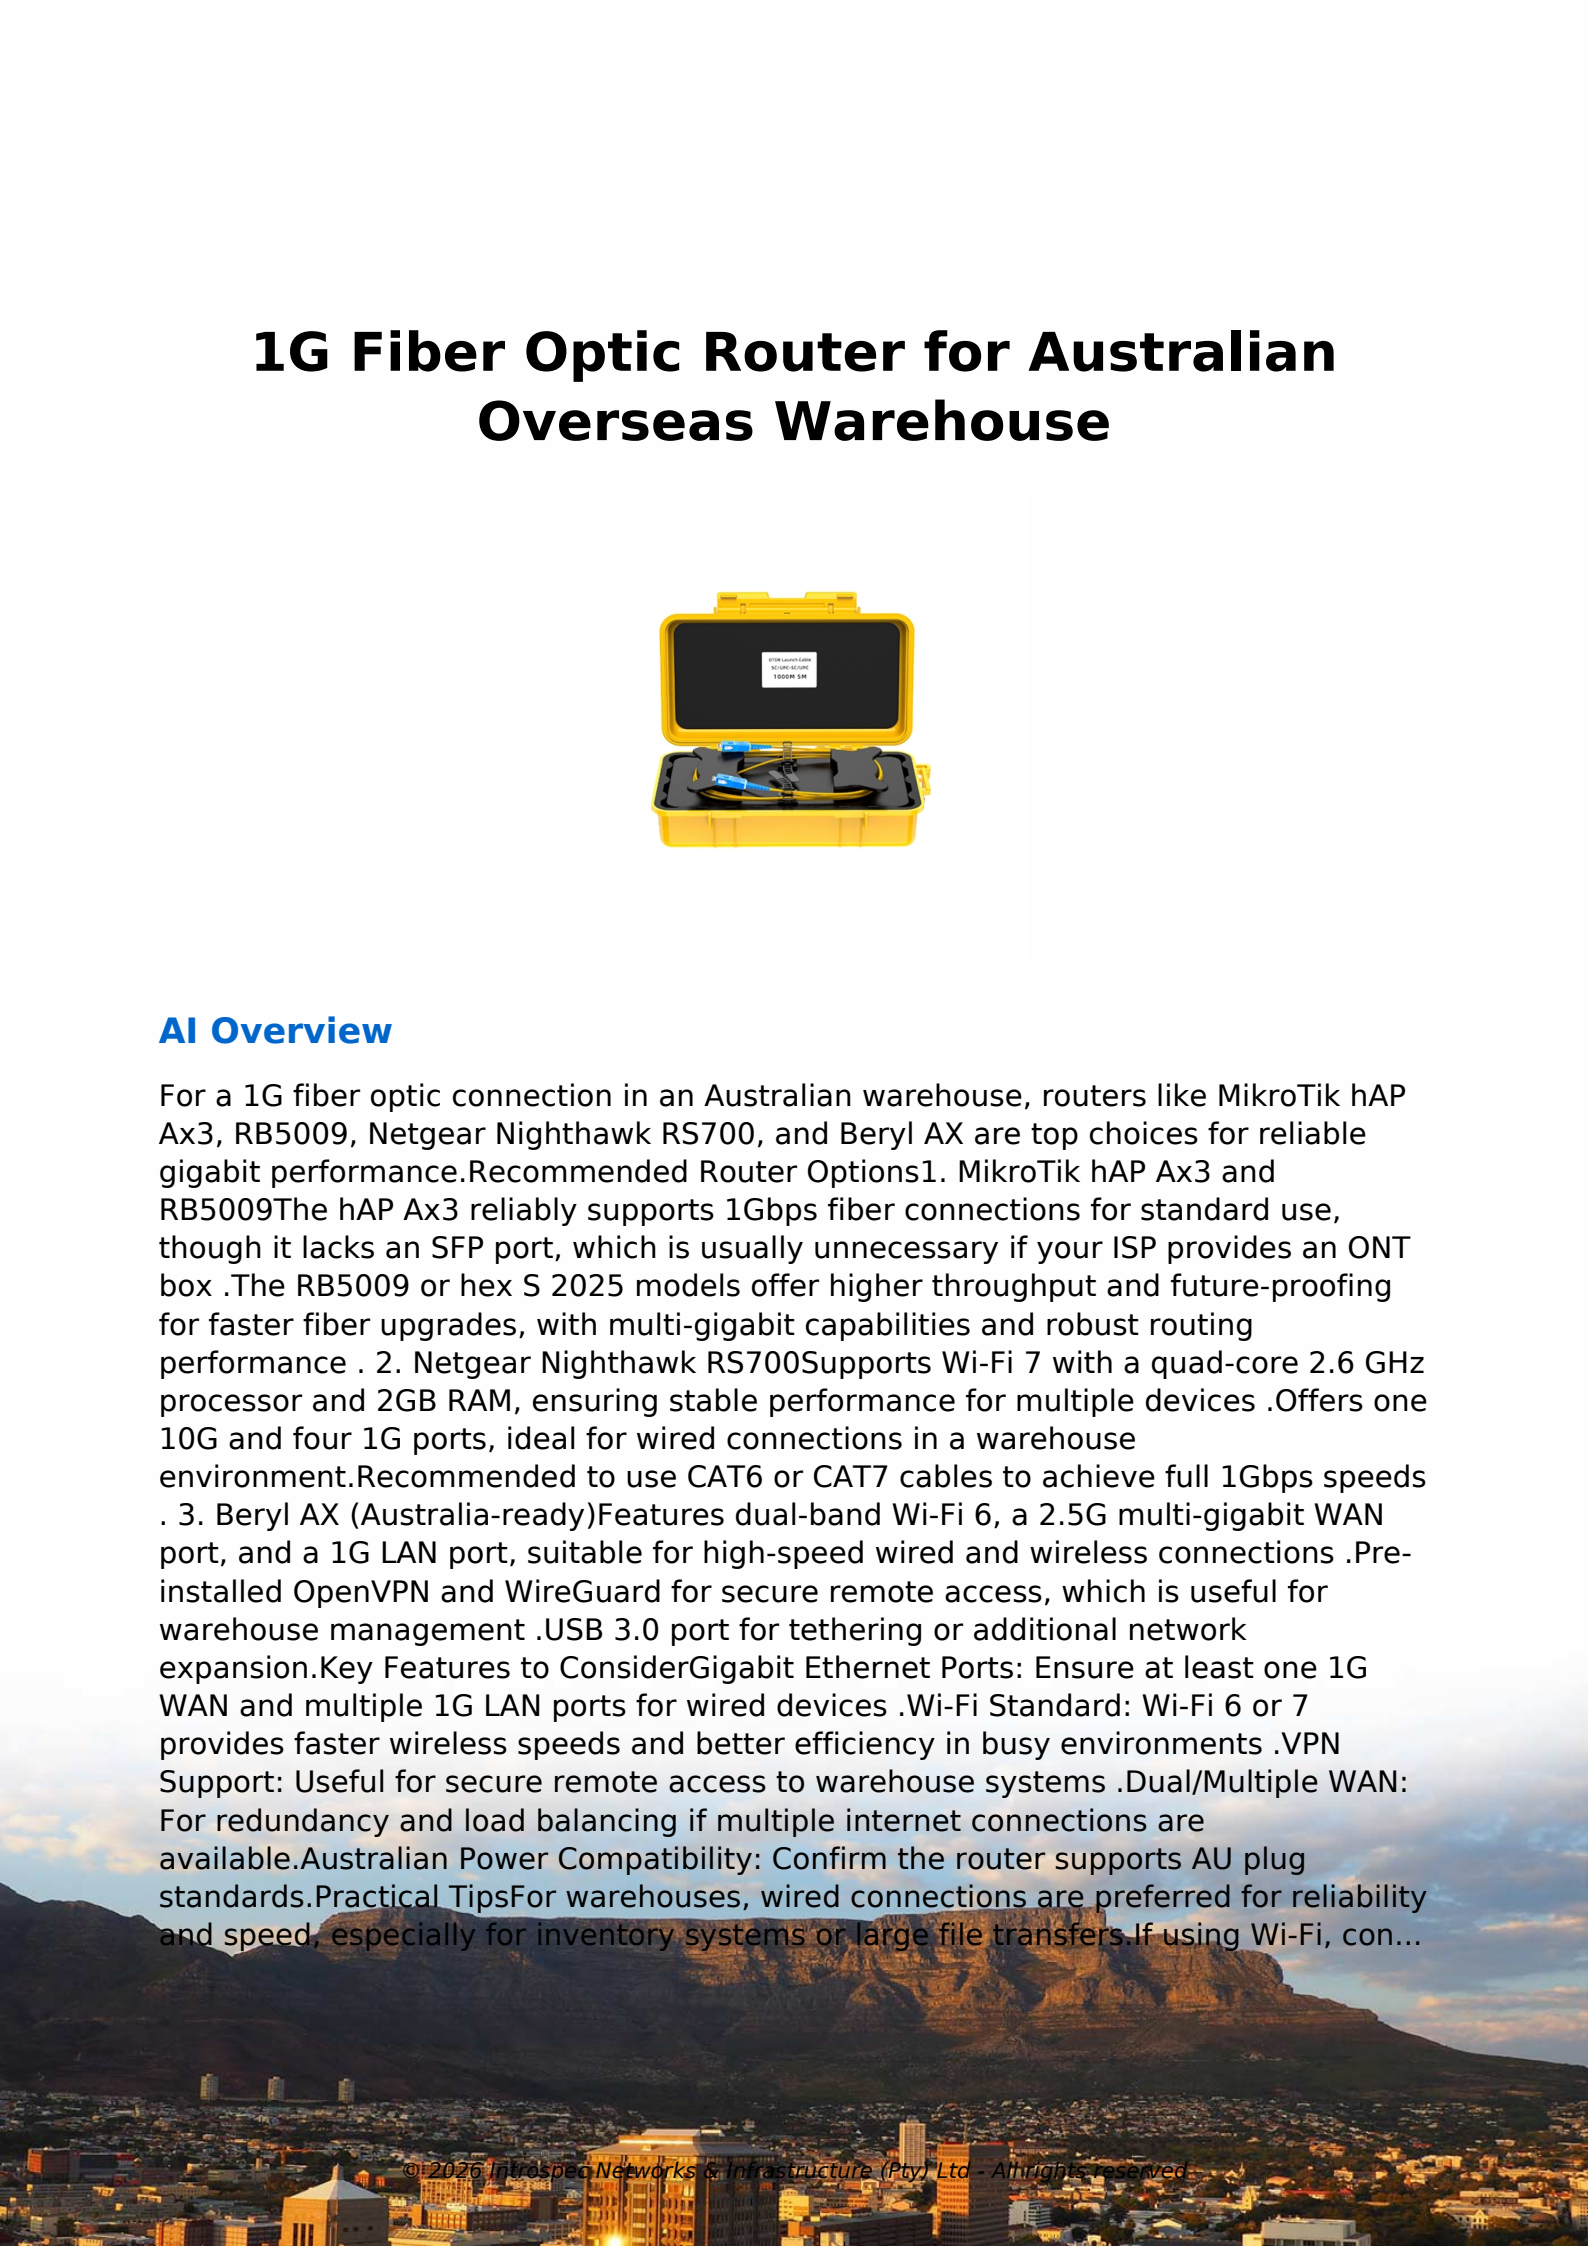

- 1. MikroTik hAP Ax3 and RB5009**  
The hAP Ax3 reliably supports 1Gbps fiber connections for standard use, though it lacks an SFP port, which is usually unnecessary if your ISP provides an ONT box. The RB5009 or hex S 2025 models offer higher throughput and future-proofing for faster fiber upgrades, with multi-gigabit capabilities and robust routing performance.
- 2. Netgear Nighthawk RS700**  
Supports Wi-Fi 7 with a quad-core 2.6 GHz processor and 2GB RAM, ensuring stable performance for multiple devices. Offers one 10G and four 1G ports, ideal for wired connections in a warehouse environment. Recommended to use CAT6 or CAT7 cables to achieve full 1Gbps speeds.
- 3. Beryl AX (Australia-ready)**  
Features dual-band Wi-Fi 6, a 2.5G multi-gigabit WAN port, and a 1G LAN port, suitable for high-speed wired and wireless connections. Pre-installed OpenVPN and WireGuard for secure remote access, which is useful for warehouse management. USB 3.0 port for tethering or additional network expansion.

**Key Features to Consider**

- Gigabit Ethernet Ports:** Ensure at least one 1G WAN and multiple 1G LAN ports for wired devices.
- Wi-Fi Standard:** Wi-Fi 6 or 7 provides faster wireless speeds and better efficiency in busy environments.
- VPN Support:** Useful for secure remote access to warehouse systems.
- Dual/Multiple WAN:** For redundancy and load balancing if multiple internet connections are available.
- Australian Power Compatibility:** Confirm the router supports AU plug standards.

**Practical Tips** For warehouses, wired connections are preferred for reliability and speed, especially for inventory systems or large file transfers. If using Wi-Fi, con...
