

24 sets of distribution boxes

AI Overview

24-module or 24-way distribution boxes are available in indoor, flush-mounted, and IP65-rated outdoor versions, suitable for residential, commercial, and industrial applications.

Types and Features

Indoor Distribution Boxes: Indoor 24-module boxes, such as the DISBOX-MA series, are designed for surface mounting and come with transparent or gray doors, pre-installed DIN rails, and terminals for easy assembly. They offer IP40 protection, making them ideal for indoor environments where dust and moisture are minimal.

Flush-Mounting Distribution Boards: Flush-mounted 24-module boards are suitable for residential and commercial installations. They can be installed side-by-side using coupling tools, come with module masks, circuit labels, and lead-sealable removable panels. These boards often support halogen-free materials and comply with CEI standards.

Outdoor/Industrial Distribution Boxes: For industrial or outdoor use, 24-way distribution boxes with IP65 protection provide secure cable management and weather resistance. They include pre-mounted double membrane seals for easy installation and are designed to withstand harsh environments.

Metal Distribution Boxes: Metal 24-way panels are available for heavy-duty applications, offering durability and enhanced protection against mechanical impacts and environmental factors.

Considerations for Selection

IP Rating: Choose IP40 for indoor use and IP65 for outdoor or industrial environments.

Material: Plastic for lightweight indoor use, metal for robust industrial applications.

Mounting Type: Surface-mounted, flush-mounted, or modular side-by-side installation.

Accessories: Ensure availability of DIN rails, terminals, module masks, and labeling options.

Application: Residential, commercial, or industrial electrical distribution needs. By selecting the appropriate type of 24-module or 24-way distribution box, you can ensure safe, organized, and compliant electrical installations for your specific environment.
