

90-degree straight angle bend in cable tray

Overview

Creating a 90-degree elbow in an electrical cable tray, often called a "fabricated" or "mitered" bend, involves cutting, bending, and fastening a straight section of tray. The most common method involves creating two 45-degree cuts to form a 90-degree angle. Great if you are new or just forgot how to do it, this easy to follow guide makes it so simple. Ensure compliance with NEC, IEC, and NEMA bend-radius standards for safe cable routing. Calculate centerline arc lengths, structural setback bounds, linear chords, and offset tray travel. 45° & 90° flat bends are available for light, medium and heavy duty cable tray systems with widths ranging from 50mm – 900mm. Materials and finishes available are mild. The method for producing bridge bend elbows is as follows: Take a 90-degree cable tray bend elbow as an example, and apply the same principles for 45-degree bends accordingly. The length of the bottom side (bottom diagonal) after bending the cable tray should be equal to the width of the cable. Cablofil Wiremesh cable tray concept based upon performance safety and economy; three qualities which make Cablofil Wiremesh cable tray system preferred by installers.
