

Busbar Rivet Manufacturer Price Quote

AI Overview

Busbar rivets typically cost between \$0.01 and \$0.10 per piece, with prices varying based on type, material, and order volume. Price Range and Factors

Standard structural rivets suitable for busbar applications generally cost \$0.01 to \$0.04 per piece, while high-strength or specialized rivets can range from \$0.10 up to \$50 per piece depending on performance requirements and material specifications (steel, aluminum, or copper). Bulk orders and factory-direct purchases from manufacturers in China or other industrial hubs often reduce per-unit costs significantly. Key factors affecting rivet pricing include:

- Material composition:** Copper and steel rivets are more expensive than aluminum due to higher strength and conductivity.
- Rivet type:** Blind, solid, or dome-head rivets have different manufacturing complexities and costs.
- Size and strength requirements:** Larger or high-strength rivets require more material and precision, increasing cost.
- Order volume:** Bulk purchases typically offer lower per-unit prices due to economies of scale.
- Customization:** OEM or custom rivets with specific dimensions or coatings may increase cost.

Sourcing Tips

- Factory-direct quotes:** Contacting manufacturers directly can provide competitive pricing and allow negotiation for bulk orders.
- Compare suppliers:** Evaluate multiple manufacturers to balance cost, quality, and delivery times.
- Consider material alternatives:** For less critical applications, aluminum rivets may offer cost savings without compromising performance.

By understanding these factors, buyers can estimate costs accurately and select rivets that meet both budget and performance requirements.
