

Cable tray support arm on the cable tray

AI Overview

Cable tray support arms are structural components designed to securely support cable trays and ladders, ensuring proper load distribution and compliance with industry standards.

Overview Cable tray support arms, also known as cantilever arms or support brackets, are used to mechanically support cable trays, cable ladders, and trunking systems. They are essential for maintaining the integrity of cable installations, preventing sagging, and ensuring safe routing of electrical and communication cables. These supports can be mounted on walls, ceilings, floors, or steel structures depending on the installation requirements.

Types of Support Arms

- Cantilever Arms:** Extend horizontally from a wall or vertical structure to support a cable tray. They are available in single-bolt or two-bolt configurations, with open faces at the top, bottom, left, or right to accommodate different tray orientations. Heavy-duty versions, such as the 410mm welded cantilever arm, provide enhanced load support and are often hot-dip galvanized for corrosion resistance.
- Specialist Brackets:** Designed for specific applications, including extra support for horizontal runs or unusual tray configurations. These may include two-bolt fixing with additional reinforcement for high-load scenarios.

Materials and Finishes Support arms are typically made from low-carbon steel or stainless steel, manufactured according to standards such as BS 6946:1988. Common finishes include:

- Pre-galvanized coating (ASTM A653M G90/G60)
- Hot-dip galvanization (ASTM A123 or BS EN ISO 1461:2009)
- Custom coatings available upon request for enhanced corrosion protection

Installation and Mounting Support arms are attached using mounting elements such as bolts, anchors, or plates. For concrete structures, anchors like M10, M12, or M16 are used, while steel channels may require hex bolts. Proper installation ensures the system can withstand mechanical loads, environmental conditions, and forces generated by cables, including short-circuit events.

Standards and Compliance
