

Cable tray tie-down

AI Overview

To properly tie down cables in a cable tray, consider the following practices:

- Use Cable Ties:** A common method is to use cable ties or zip ties to secure and support cables in the tray. Ensure that the ties are UL certified for safety.
- Horizontal vs. Non-Horizontal Runs:** In horizontal cable tray runs, cables do not need to be tied down as their weight keeps them in place. However, in non-horizontal runs, cables must be tied down to prevent them from hanging away from the tray.

These practices help ensure the safety and organization of cable installations.
