

# Carrier backbone network dual-port information panel 1200mm deep landed price

## AI Overview

A 1200mm deep carrier backbone network dual-port panel requires a compatible server rack and vendor-specific pricing, as landed costs vary by region, shipping, and configuration.

**Technical Overview** Carrier backbone network panels are designed for high-capacity IP/MPLS networks, supporting dual-port connectivity for redundancy and high throughput. These panels are typically installed in 19-inch server racks and can accommodate L2VPN, L3VPN, MPLS-TE, QoS, and multicast services. Dual-port panels allow simultaneous connections to two network paths, ensuring failover and load balancing in carrier-class environments.

**Rack Compatibility** For a 1200mm deep panel, you need a server cabinet or rack with at least 1200mm depth. Vendors like Comms Express offer 800mm wide x 1200mm deep racks suitable for carrier network equipment, compatible with Dell, HP, and IBM servers. These racks are built-to-order and provide sufficient space for airflow, cable management, and power distribution.

**Vendor Options**

- Pan Dacom Direkt:** Offers backbone solutions with high-capacity interface cards and service boards for IP/MPLS networks.
- Huawei DCI Backbone Solutions:** Provides high-capacity optical switching panels with low power consumption and small footprint, supporting 100G and 200G CFP modules for long-haul transmission.
- Core Backbone GmbH:** Offers flexible IT services and network infrastructure solutions, including point-to-point and point-to-multipoint connectivity.

**Landed Price Considerations** The landed price includes the product cost, shipping, import duties, and taxes. Since these panels are built-to-order and region-specific, prices vary significantly depending on:

- Vendor and model**
- Module capacity** (e.g., 100...
