

Comprehensive container rack high-temperature resistant FOB price

AI Overview

High-temperature resistant container racks are heavy-duty, customizable storage solutions, with FOB prices typically ranging from \$50 to \$500+ per unit depending on materials, size, and order volume.

Product Overview

High-temperature resistant container racks are designed for industrial environments where heat, heavy loads, and frequent handling are factors. These racks are typically constructed from high-strength steel or reinforced iron, often with coatings or treatments to withstand elevated temperatures and mechanical stress. They are suitable for warehouses, manufacturing facilities, and outdoor storage where temperature fluctuations are common. Key features include:

- Load-bearing capacity:** Engineered to support large containers, IBCs, or tote bins.
- Modular design:** Expandable and reconfigurable to adapt to changing storage needs.
- Mobility options:** Some racks include wheels or casters for dynamic layout adjustments.
- Customization:** Can be insulated or treated for extreme heat resistance, with optional coatings for corrosion protection.
- Compatibility:** Designed for forklift handling and integration with automated systems.

FOB Pricing

FOB (Free On Board) price refers to the cost of the product delivered to the export port, including production, packaging, inland transport to the port, export customs clearance, port charges, and loading onto the vessel. It does not include ocean freight, insurance, import duties, or delivery to your warehouse.

For high-temperature container racks:

- Typical FOB range:** \$50-\$500+ per unit depending on size, material, and order quantity.
- Factors affecting FOB price:**
 - Material type** (e.g., stainless steel vs. carbon steel)
 - Rack dimensions and load capacity**
 - Customization** for heat resistance or coatings
 - Order volume** (bulk orders often reduce per-unit cost)
 - Export port location** (e.g., FOB Shanghai, FOB Ningbo)
