

Construction site electrical distribution box base price

AI Overview

Construction site electrical distribution boxes typically range from \$200 to over \$2,000 depending on capacity, material, and features. Price Range and Factors The cost of a construction site distribution box varies widely based on voltage rating, amperage capacity, number of circuits, material, and safety features. Basic single-phase boxes for light-duty use may start around \$200-\$400, while heavy-duty three-phase boxes with multiple circuits, weatherproof enclosures, and advanced safety features can exceed \$1,500-\$2,000 or more. Outdoor-rated, weather-resistant enclosures generally carry a premium compared to indoor units. Material and Construction Distribution boxes are made from sheet steel, thermoplastic, fiberglass, or polyester, with varying impact resistance and IP ratings (e.g., IP65-IP67) to withstand harsh construction environments. Robust construction ensures durability and compliance with standards such as IEC 61439 and IEC 60364. Additional Costs Beyond the purchase price, consider installation, maintenance, and potential customization. Some units include pre-wired circuits, circuit breakers, or smart monitoring features, which can increase upfront costs but improve safety and operational efficiency. Custom options like specific mounting configurations or integration with building management systems may also affect pricing. Suppliers and Availability Distribution boxes are available from industrial suppliers and online retailers such as Amazon, One-Elec, and manufacturers on platforms like Made-in-China. Factory-direct purchases may offer lower prices, especially for bulk orders, and some suppliers provide OEM/ODM customization. Summary When budgeting for a construction site electrical distribution box, expect \$200-\$2,000+ depending on size, capacity, material, and additional features. Always consider durability, compliance...
