

Cost of galvanized metal cable trays in Afghanistan

AI Overview

Galvanized metal cable trays in Afghanistan typically range from \$10 to \$30 per meter, depending on type, size, and supplier. Overview Galvanized cable trays are steel trays coated with zinc through a hot-dip galvanization process, providing corrosion resistance and durability in harsh environments, which makes them suitable for industrial, commercial, and construction applications in Afghanistan. They are available in various designs, including ladder, perforated, and wire mesh trays, each with different load capacities and ventilation properties. Price Range Standard galvanized steel trays: \$10–\$30 per meter, with ladder-type trays generally at the higher end due to their strength and load-bearing capacity. Aluminum trays: \$20–\$50 per meter, lighter and rust-proof but more expensive than steel. Bulk orders: Prices can be lower per meter due to volume discounts and supplier negotiations. Fittings and accessories: Additional costs apply per piece for bends, tees, and connectors, typically calculated separately. Factors Affecting Cost Material and Coating: Hot-dip galvanized (HDG) steel is more durable and slightly more expensive than pre-galvanized steel. Tray Type: Ladder trays are stronger and cost more, while perforated trays are cheaper and suitable for lighter loads. Supplier and Location: Local suppliers in Kabul and other major cities may offer competitive pricing, while imported trays may include shipping costs. Installation and Labor: Skilled labor costs vary regionally, and installation complexity can add to the total project cost. Suppliers in Afghanistan Brilltech Engineers Pvt. Ltd: Offers high-quality hot-dip galvanized ladder trays with corrosion-resistant properties, suitable for industrial and construction projects. Local manufacturers: Several Afghan suppliers provide galvanized trays with customization options for size, length, and design. Ga...
