

DIP switches for industrial switches

Overview

DIP switches (Dual In-line Package) are miniature switches designed to provide simple and precise configuration in electronic circuits. Commonly used on printed circuit boards (PCBs), these switches allow parameter adjustments in electronic devices, control systems, and industrial. A DIP switch is a manual electronic package that is composed of a series of tiny switches. Our DIP switch selection offers a broad pallet of options with various actuation styles, switch. DIP Switches are electromechanical devices used to control current flow in a circuit. Devices in this family are usually groupings of small switches used as jumper blocks or small rotary type switches that require a tool to set. The most common types include slide, rotary, rocker, piano, IC, SMD, and BCD code dip switches.
