

Dedicated for series connection of distribution boxes

Overview

The SCB protects the devices in series connection from exceeding the specified insulation voltage, ensuring safe operation. In addition, EA's systems can be used flexibly with the help of the SCB. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The SCB empowers engineers to meet modern energy demands with confidence and flexibility. A. Here, decentralized electrical installation has proven its worth: Our distribution boxes offer the necessary installation space for pluggable installation - for the most diverse applications in the most diverse areas of use: Our distribution box can be used wherever high demands and harsh. The ArTu distribution switchboards are enriched by the new L series for applications up to 630A, which widens the ABB offer in the secondary and terminal distribution sector: a series able to combine quality performances with maximum selection and assembly simplicity. switchboards, also facilitates. Use distributor boxes for quick and clear cabling in the field. Thanks to the status indicator, you have an overview of a large number of signals.
