

Dimensions of a 25-position concealed electrical box

AI Overview

A 25-position concealed electrical box is typically a large multi-gang box, with dimensions roughly 72-80 inches in width, 4-6 inches in height, and 3-5 inches in depth, depending on manufacturer and internal volume requirements. Estimating Size for a 25-Position Box Electrical boxes are sized based on the number of device positions (gangs) and the internal volume needed for wiring and components. A 25-position box is considered a very large multi-gang configuration, often used for centralized control panels, multiple switches, or complex junctions. Standard multi-gang boxes increase in width with each additional position, while depth is critical for wire fill and safety. Width: Each gang typically requires 1.5-2 inches of width. For 25 positions, the total width is approximately 37.5-50 inches. In practice, manufacturers may provide modular or sectional boxes to achieve this width without creating a single unwieldy unit. Height: Standard wall-mounted boxes are usually 4-6 inches tall, sufficient to accommodate device height and wiring clearance. Depth: Depth is crucial for wire fill. For high-density boxes like a 25-position unit, 3-5 inches is common, with deeper boxes preferred for multiple conductors and complex terminations. Internal Volume Considerations Internal volume is measured in cubic inches and must comply with NEC wire-fill guidelines. A 25-position box may require several hundred cubic inches to safely house conductors, connectors, and devices. Using a deeper box or modular sections helps prevent overcrowding and allows for future expansion. Material and Installation Notes Material: Metal (steel) or PVC boxes are common. Metal boxes allow thinner walls, maximizing internal volume, while PVC boxes have thicker walls but are easier to cut and install. Concealed Installation: For recessed or concealed applications, ensure the box fits within wall studs and allows...
