

Distribution Box 8 Switches

AI Overview

An 8-switch distribution box allows centralized power or signal distribution to multiple devices, offering modular, safe, and efficient connectivity for industrial or lighting applications.

Types and Applications

- 1. Hager Klik KLDS8** The Hager Klik KLDS8 is a lighting distribution box with 8 outlets designed for quick plug-in connections. It uses a modular plug-and-socket interface that provides simultaneous mechanical and electrical connection in one click, ensuring safety as all live contacts are inaccessible until the earthing connection is made. It supports 3- and 4-pin Klik plugs, making it ideal for lighting installations where fast, safe, and flexible connections are required.
- 2. Beckhoff EP9208-1035 EtherCAT Box** This is a fully passive 8-channel distribution box for industrial automation. Each output is an M12 socket with L-coding, capable of carrying up to 16 A at 24 V DC/48 V DC per channel. The box features LED indicators for each channel and the supply, and the inputs and outputs are directly connected without intermediate electronics. It is suitable for powering smart servo drives or sensors in automation systems.
- 3. MURRELEKTRONIK EXACT8** The EXACT8 distribution box is a passive sensor junction block with 8 ports. It receives input from a single power or data cable and distributes it to multiple outputs without requiring an external power source. This type is commonly used in sensor networks or industrial control systems, providing a simple and reliable way to extend connections from a single cable to multiple devices.

Key Features to Consider

- Passive vs Active:** Passive boxes like Beckhoff EP9208-1035 and MURRELEKTRONIK EXACT8 do not amplify or modify signals, while active boxes may include electronics for signal conditioning.
- Connectivity:** Options include M12 sockets, Klik plugs, or standard terminal blocks depending on the application.
- Current and Voltage Ratings:** Ensure the box supports the required load; for example, Beckhoff supports 16 A per channel at 24–48 V DC.
- Safety:** Look for features like inaccessible live contacts, earthing-first co...
