

Easy-to-Install Cable Trays in Iran

AI Overview

Tray-type cable trays in Iran can be installed using PVC or metal trays, following international standards and local best practices for support, spacing, and safety.

Types of Cable Trays Available in Iran

PVC Cable Trays: Manufactured locally by companies like Alborz Industrial Group, PVC trays are non-combustible, self-extinguishing, resistant to UV, chemicals, and moisture, and ideal for humid or corrosive environments. They are easy to install, have smooth corners to prevent cable damage, and come in various sizes and colors.

Metal Cable Trays: These include galvanized steel trays (cold or hot-dip galvanized). Hot-dip galvanized trays provide high resistance to corrosion and moisture, suitable for harsh environments, while cold-galvanized trays are less resistant and not recommended for humid areas.

Ladder-type and perforated trays are commonly used to allow ventilation and prevent water retention.

Installation Procedure

Material Inspection and Storage: All trays and accessories should be inspected for damage and compliance with project specifications upon delivery. Store trays horizontally on flat surfaces with timber supports at intervals of 1 meter, protected from moisture and sunlight.

Route Planning: Review approved shop drawings to determine tray routes, lengths, and locations. Ensure horizontal and vertical runs, maintain clearance for cable pulling, and avoid clashes with other services.

Support and Fixing: Use threaded rods, metal plugs, 'L' angles, or slotted 'C' channels to support trays. Maximum spacing between supports is typically 1.2 meters for ladder trays and 2–3 meters for perforated trays, depending on load and tray type. Provide additional support at bends, branches, and offsets.

Tray Installation: Install trays flat whenever possible. Vertical or edgewise installation is only for special cases. Cables in horizontal trays are fixed in groups using stainless steel strips, while vertical trays require individual fastening.

Load and Safety Considerations: Design trays to carry the expected load (commonly 100 kg/...
