

Effect of rack mesh cable tray

Overview

Unlike solid trays, wire mesh cable trays allow air to pass freely through and around the tray structure. This open design minimizes airflow resistance and helps maintain consistent air pressure under the floor, improving cold air delivery to server intakes. Making future changes painless. That's why the decision isn't cosmetic. It directly affects uptime, efficiency, and operating costs. If you're moving heavy bundles, select the minimum bend radius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is intended for instrumentation and control applications that require additional protection to support and protect numerous small. For a long time, wire mesh trays sat in a narrow corner of the cable management world. They form an open, rigid structure used to support and organize large quantities of cable across both short and long distances. What Are Channel Cable Management Trays?
