

Egyptian Household Electrical Distribution Box

AI Overview

Electric distribution boxes in Egypt are available in a variety of materials, sizes, and protection ratings, suitable for residential, commercial, and industrial applications. Types and Materials Electric distribution boxes in Egypt are offered in steel, stainless steel, and high-performance plastic. Steel and stainless steel enclosures are ideal for industrial and commercial applications, providing durability and resistance to mechanical impacts, chemicals, and harsh environments. Plastic and polyester boxes offer total insulation, making them suitable for outdoor use and areas with high humidity or exposure to sunlight. Protection Ratings Distribution boxes come with IP (Ingress Protection) ratings such as IP65, which ensures protection against dust and low-pressure water jets, and IK ratings like IK09 for impact resistance. These ratings are crucial for outdoor installations or environments exposed to dust, moisture, or mechanical stress. Modular Capacity and Design Residential and small commercial buildings typically use modular cabinets ranging from 4 to 72 modules, with options for 8, 12, 13, 18, 24, or 36 modules per row. Larger industrial enclosures can accommodate assemblies up to 800 A, with heights from 1050 mm to 1950 mm. Some cabinets are flush-mounted, while others are wall-mounted or floor-standing, depending on installation requirements. Key Features Modern distribution boxes in Egypt often include: Main switch and circuit breakers for complete system control and safety Overload and short-circuit protection to prevent fire hazards and equipment damage Prefabricated rail terminals and rails for easier installation and secure connections UV resistance and high-temperature tolerance (up to 650°C for some plastic models) for outdoor and extreme conditions Compatibility with cable sleeves and modular integration for flexible configuration L...
