

Fc moisture-proof distribution box

AI Overview

FC type moisture-proof distribution boxes are IP65-rated enclosures designed to protect fiber optic connections from water, dust, and environmental damage while supporting FC adapters for flexible network connectivity.

Key Features

Protection and Durability: These boxes are constructed from high-strength ABS or PC+ABS materials, offering IP65 waterproofing, UV resistance, and dustproofing, making them suitable for both indoor and outdoor installations. Some models also operate reliably in extreme temperatures from -40°C to 60°C.

Adapter Compatibility: FC type distribution boxes support FC adapters, and many models also accommodate SC, LC, or PLC splitters, allowing flexible connectivity for various fiber optic network topologies.

Capacity and Splicing: Depending on the model, these boxes can handle 2 to 24 fiber cores, with integrated splice trays for fusion splicing. They often include cable management guides and clamps to prevent bending and maintain signal integrity.

Mounting Options: Designed for versatility, these boxes can be wall-mounted, pole-mounted, or aerially installed, providing flexibility for FTTH, FTTB, or industrial network deployments.

Additional Features: Many boxes include sliding adapter holders for easy patch cord installation, space for optical splitters for PON systems, and independent pathways for incoming and outgoing cables to prevent interference. They are also RoHS and REACH compliant, ensuring environmental and safety standards are met.

Applications

FTTH/FTTx networks: Efficiently manage fiber connections for residential or commercial deployments.

Industrial networks: Protect fiber connections in harsh outdoor or factory environments.

PON systems: Support optical splitters for passive optical networks.

Summary

FC type moisture-proof fiber optic distribution boxes provide robust protection, flexible connectivity, and organized fiber management. With IP65-rated enclosures, adapter compatibility, and versatile mounting options, they are ideal for reliable fiber optic network deployment...
