

Gigabit Aggregation Switch Uplink Port

Overview

Equipped with future-proof fiber-optic and multi-Gigabit Ethernet (mGbE) ports as well as high-throughput uplink and stacking ports, they form the basis for efficient and fail-safe networks. Stacking allows network expansions, redundancy scenarios, and single IP. LACP (Link Aggregation Control Protocol): LACP is an industry-standard protocol (802.3ad) that dynamically manages link aggregation, provides automatic failover, and helps prevent misconfigurations by ensuring both ends of the link agree on the aggregation settings. Unlike regular ports, it often supports higher bandwidth (e., SFP+, QSFP+) and may auto-detect straight or crossover. Provides 1G, 2.5G, and 10G speeds for flexible customization, ensuring optimal performance, compatibility, and scalability. Flexible interface options like copper, fiber, and PoE ensure seamless integration and cost-effective deployment. Supports stacking for easier management, improved redundancy. Provides 1G, 2.5G. It has 16*10/100/1000Base-T adaptive RJ45 ports and 4*100/1000Base-X uplink SFP fiber ports. The ONV33020FM has L2+ network management functions.
