

Grenada Secondary Distribution Box Specifications

AI Overview

Grenada secondary distribution boxes are designed for safe power distribution in residential, commercial, and industrial settings, with ratings up to 400V and 100A, featuring enclosed, modular, and protective designs. General Features Secondary distribution boxes in Grenada are used to distribute electricity from the main supply to individual circuits while providing protection against overload, short circuits, and leakage. They are suitable for single-phase or three-phase systems with AC 50/60Hz and rated voltages up to 400V. Load current typically does not exceed 100A for standard industrial or commercial applications. Surface-Mounted

Residential/Commercial Boxes Modules: Commonly 8-module capacity for circuit breakers. Enclosure: Flame-retardant, impact-resistant plastic with IP65 waterproof rating, suitable for indoor and outdoor use. Dimensions: Approximately 200 x 155 x 95 mm. Features: Transparent window for monitoring breaker status, complete installation kit, and grommets for cable entry. Limitations: Some models may not include separate neutral (N) and protective earth (PE) terminals, requiring additional terminal blocks on the DIN rail. Industrial/Lighting Distribution Boxes (XRM Type) Applications: Industrial, mining, production workshops, building distribution, and lighting control. System Compatibility: Single-phase three-wire or three-phase five-wire systems. Protection: Overload, short circuit, and leakage protection integrated. Enclosure: Fully enclosed with surface-mounted measuring instruments, control switches, buttons, and signal indicators for operational monitoring. Current and Voltage Ratings: Rated voltage up to 400V, load current up to 100A. Usage: Controls motors, electrical equipment, and lighting in AC 50Hz, 380/220V three-phase four-wire systems. Applications Residential: Power distribution for homes, apartments, an...
