

Household Distribution Box Module

AI Overview

Household distribution box modules are modular units that safely distribute electrical power to various circuits in a home, offering flexibility, safety, and expandability. Overview A household distribution box, also known as a DB box or power distribution board, is a central hub that routes electricity from the main supply to different circuits within a home, ensuring that lights, outlets, and high-power appliances receive the correct power without overloading any circuit. Modern distribution boxes use circuit breakers instead of fuses, allowing easy reset after an overload or short circuit. Modular Design Modular distribution boxes consist of individual modules that can be customized according to the number of circuits required. Common configurations include 16- and 32-module bases, with options for horizontal and vertical expansion. Some series, like the DISBOX-MA, offer 8 to 54 modules for indoor applications, with IP40 protection for safety. Modular designs allow combining multiple boxes into a seamless system using special connection kits. Key Features Safety: Flame-retardant materials, short-circuit and overload protection, and reliable circuit breakers ensure household safety. Accessibility: Transparent or opaque covers with 180° openable doors provide easy access for maintenance. Installation Flexibility: Suitable for flush or surface mounting, with options for plastic or metal enclosures, and 1 to 5 rows depending on the number of modules. Dedicated Circuits: Recommended configurations include a main switch, separate circuits for room sockets, high-power appliances, and lighting, ensuring stable and independent operation. Protection Ratings: Some models, like the CHINT DB4-Series, offer IP65 protection, making them suitable for outdoor or humid environments. Applications Household distribution boxes are used in residential buildings to manage electricity efficiently and safely. They are essential for homes with multiple circuits, high-power appliances, or smart home systems. Modular boxes also allow future ex...
