

How much does a 200-watt laser diode cost

AI Overview

A 200-watt laser diode typically costs between \$1,500 and \$5,000, depending on manufacturer, package type, and additional features. Price Range and Factors High-power laser diodes, such as 200W units, are considered specialized devices, and their prices vary significantly based on several factors: Manufacturer and Brand: Prices can differ by more than 50% between manufacturers due to quality, reliability, and support. Package Type: Basic fiber-coupled modules are generally less expensive, while advanced modules with integrated cooling, pilot lasers, and monitoring photodiodes cost more. Features: Diodes with integrated cooling systems, higher efficiency, or precise wavelength control are priced higher. Market Source: Online marketplaces like eBay may offer lower prices for surplus or used units, sometimes around \$1,500–\$2,500. Direct suppliers or distributors may charge \$3,000–\$5,000 for new, fully featured modules. Additional Considerations Shipping and Tariffs: Import tariffs or shipping costs can add 10–20% to the total price, especially for international orders. Warranty and Support: Higher-priced units often include manufacturer support and warranty, which can be critical for industrial or research applications. Availability: High-power diodes are less common than low-power units, so lead times may affect cost. In summary, if you are looking to purchase a 200W laser diode, expect to pay roughly \$1,500 to \$5,000, with the final price depending on the module type, manufacturer, and additional features.
