

How much does a secondary distribution box cost

AI Overview

A secondary distribution box typically costs between \$1,100 and \$4,500 on-site, depending on amperage, enclosure type, labor, and installation complexity.

Cost Breakdown

Equipment Costs: Basic residential panels (100–125A) generally range from \$150 to \$1,500 for parts, including the enclosure, breakers, and busbars. Mid-range panels (150–200A) with more circuits or higher-quality materials can cost \$1,200–\$2,500. Industrial-grade or outdoor-rated stainless steel boxes may reach \$2,000 or more, especially with advanced features like surge protection or smart monitoring.

Labor and Installation: Professional installation typically adds \$1,000–\$2,000 for standard residential setups, depending on complexity and local labor rates. Labor hours can range from 4 to 18 hours, influenced by wiring length, accessibility, and whether a full panel upgrade or rerouting is required. Electrician hourly rates usually fall between \$75 and \$150, with potential surcharges for rural locations, overtime, or difficult access.

Additional Costs: Permits and inspections can add \$100–\$300 depending on local regulations. Structural modifications, conduit rerouting, or meter socket replacement may increase the total by 10–20%. Outdoor or weather-resistant enclosures generally carry a premium over indoor-rated units.

Regional Considerations

Northeast U.S.: Costs tend to be 5–15% higher due to labor and permitting fees.

Southeast and Midwest: Often align with national averages or slightly lower, with rural areas saving on labor but possibly incurring transport fees for specialized panels.

Urban areas: May include delivery and permit surcharges.

Summary

For a typical on-site secondary distribution box installation:

- Low-end residential: \$1,100–\$1,600
- Mid-range residential: \$1,500–\$2,500
- High-end or industrial: \$2,500–\$4,500+

The final cost depends heavily on amperage, enclosure...
