

How to delete the cable tray elbow in GQI

AI Overview

To delete a cable tray elbow in GQI, you need to select the fitting in the tray sequence and remove it using the software's fitting or component removal tools. Step-by-Step Guide

1. Open the Tray Sequence or Model Explorer. Ensure you are at the correct branch or component level in the Model Explorer. If you attempt to remove a component at the wrong level, the software may display an error indicating that the element is not at a branch.
2. Select the Elbow Component. Click on the elbow fitting you want to delete in the 3D graphical view or in the tray sequence. In CADprofi, elbows are parametric objects, so selecting the fitting will allow you to modify or remove it.
3. Use the Remove or Delete Function. In AVEVA, go to the Cable Tray tab, then in the Tools group, click Remove Straights or the equivalent removal tool. You will be prompted to identify the component in the 3D view, and the elbow will be removed from the branch. In CADprofi, after selecting the elbow, you can press Delete or use the fitting removal option in the toolbar. Ensure you are not copying dimensions from another fitting with incompatible parameters.
4. Adjust the Tray Sequence if Needed. After removing the elbow, check the tray sequence to ensure continuity. You may need to redraw a straight segment or adjust adjacent fittings to maintain proper alignment.
5. Confirm Changes. Click OK or Apply to finalize the removal. If the software prompts for confirmation, ensure the correct component is highlighted to avoid deleting unintended elements.

Additional Tips If the elbow is part of an automatically generated sequence, you may need to disable automatic insertion or adjust elbow parameters before deletion. For projects using fabrication parts or parametric families, ensure the correct family type is selected to avoid errors when removing elbows. Always save your project before making structural changes to the tray sequence to prevent accidental data loss. By following these steps, you can safely delete a cable tray elbow in GQI while maintaining the integrity of your c...
