Use a screwdriver or electric drill to unscrew the cover. Inspect the interior: Check for signs of corrosion, damage, or pests before proceeding. Access breakers or fuses: Once the cover is removed, you can identify the circuit breakers or fuses. Do not attempt internal repairs unless you are a licensed electrician. Additional Tips Always work with the power off whenever possible. Only trained professionals should handle live panels. Keep a multimeter handy to detect any residual voltage if needed. If unsure about the box type or condition, consult a licensed electrician to avoid hazards.
