

How to set the distance on an FX100 fiber optic sensor

Overview

For the setting method, refer to " SETTING MODE. " <Teaching mode> • Press OFF key (the threshold value is Thru-beam type Reflective type shifted to lower side) twice when using thru-beam type fiber, and press ON key Back (the threshold value is shifted to higher ground or side). carefully and thoroughly for the correct and optimum use of this product. Kindly keep this manual in a convenient place for quick reference. Fit the rear part of the mounting section. This is the method of setting the threshold value by teaching two points, corresponding to object present and object absent conditions. Press ON key in object present. We have separated the settings into three levels: RUN mode, SET mode, and PRO mode, making operation simpler and easier. Other features, such as the ECO mode, copy and GETA function, enhance its practicality in the. The FX-100 sensor features a dual two-color digital display with push-button and external input teaching capabilities. Versatile connection options include an industry-standard M8 quick-disconnect or connector/cable assembly.
