

# How to use cable clamps on cable tray supports

## AI Overview

Cable clamps are essential components for securing and supporting cable trays, ensuring safe, organized, and durable cable management in industrial and commercial installations.

**Types of Cable Tray Clamps**

- Hold-down clamps:** These clamps secure cables directly to the tray surface, preventing movement and maintaining organized cable runs. Heavy-duty hold-down clamps can attach trays to beams or C-channels without drilling, using set screws for easy installation and reduced labor costs (MP Husky).
- C-clamps:** Designed to support hanger rods on I-beams, wide flange beams, or angles, these clamps are typically made from unfinished iron and can handle loads up to 400 lbs (MP Husky).
- Saddle-type clamps and cable tie bases:** These are versatile mounts for wire mesh or basket trays, allowing secure routing of cables and light fixtures. They are often made from carbon steel or nylon, with finishes like electrogalvanized coating for corrosion resistance (Trowbridge Electrical).

**Materials and Finishes**

Cable tray clamps are commonly made from copper alloy, carbon steel, or iron, with optional tin plating or electrogalvanized finishes to resist corrosion in indoor or industrial environments (MP Husky, Trowbridge Electrical).

Nylon mounts are also used for lighter applications and provide environmental compliance (Trowbridge Electrical).

**Installation and Compatibility**

- Direct attachment:** Some clamps allow direct fastening to the tray and mounting surface by drilling holes, while others use set screws to attach to beams or channels without drilling (MP Husky).
- Tray type considerations:** Solid-bottom trays, ventilated trays, and ladder trays may require different clamp types or additional accessories like covers, brackets, or directional fittings to ensure proper cable support and protection (RS).
- Load capacity:** Always select clamps rated for the exp...
