

# Huawei Industrial Switch Manufacturer

## AI Overview

Huawei industrial switches are available from certified manufacturers and wholesalers primarily in China, with key hubs in Beijing, Shanghai, and Guangdong, offering robust, high-performance networking solutions for industrial environments.

**Supplier Overview**

Huawei industrial switches, including the S series, SUs series, and CloudEngine models, are designed for mission-critical applications in manufacturing, transportation, energy, and outdoor installations, providing high reliability, advanced security, and seamless integration with industrial IoT systems. These switches support features such as PoE, VLAN, DIN rail mounting, and extended temperature operation, making them suitable for harsh environments.

**Key Supplier Locations**

**Beijing:** Proximity to Huawei R&D centers and government institutions ensures access to enterprise-grade inventory and technical support. Notable suppliers include Beijing Huayue Beishang Technology and Beijing Jiayetongchuang Technology, known for high responsiveness and strong customer retention.

**Shanghai:** Excels in international logistics and export documentation, facilitating global shipments.

**Guangdong (Shenzhen):** Offers competitive pricing and rapid production turnaround due to dense component supplier networks, with Shenzhen's Huaqiangbei market serving as a major electronics distribution hub.

**Other cities:** Secondary cities may provide cost efficiencies for high-volume orders but may require additional due diligence.

**Supplier Types**

**Manufacturers:** Provide greater technical support, customization options, and consistent delivery performance.

**Trading Companies/Wholesalers:** Offer broader inventory access and handle larger transaction volumes, suitable for bulk procurement.

**Selection Considerations**

When choosing a Huawei industrial switch supplier, consider:

- Technical support and customization capabilities for integration with existing networks.
- Compliance with industry standards (e.g., NERC CIP for power, EN 50155 for rail) and firmware updates.
