

Huawei router has no fiber optic signal

AI Overview

A Huawei router showing no fiber optic signal usually indicates a Loss of Signal (LOS), which can stem from cable issues, router faults, or ISP problems.

Common Causes

- LOS Light Indication:** If the LOS light on your Huawei router blinks red or stays solid red, it signals that the router is not receiving a fiber optic signal from your ISP.
- Fiber Optic Cable Issues:** Physical damage, bends, cuts, or loose connections in the fiber optic cable can prevent signal transmission.
- Router or ONT Faults:** Internal faults in the router or Optical Network Terminal (ONT), including power distribution issues, can cause the fiber signal to disappear even if the power light remains green.
- ISP or Service Outage:** Scheduled maintenance, technical issues, or unpaid bills may temporarily suspend your service, triggering a loss of signal.
- Incorrect WAN Port or Settings:** Improper connection to the WAN port or incorrect internet access mode can prevent the router from establishing a connection.

Troubleshooting Steps

- Check for ISP Outages:** Visit your ISP's website or social media pages to confirm if there is a local service disruption.
- Inspect Fiber Optic Cable:** Ensure the cable is undamaged and securely connected to the router's WAN/ONT port. Replace any frayed or broken cables.
- Reboot the Router:** Turn off the router, unplug it for 30 seconds, then reconnect and power it on. Check if the LOS light turns green.
- Verify WAN Port and Settings:** Log in to the router's web-based management page and confirm the WAN port is correctly connected and the internet access mode matches your network environment.
- Check Router Hardware:** If the fiber signal is still missing but the power light is green, the router may have internal faults. In some models, issues with internal voltage regulators or connectors can block the fiber signal.
- Contact ISP Support:** If the above steps do not resolve the issue, contact your ISP to verify account status, check for line faults, or request a replacement ONT/router if necessary.

By systematically checking the fiber cable, router settings, and ISP stat...
