

Huijue Distribution Box Identification Steps

AI Overview

Huijue distribution boxes can be identified by their model type, voltage rating, material, and structural features, such as the HJ-501 low-voltage box or fiber optic enclosures.

Key Identification Features

- Model and Type**
HJ-501 Low Voltage Distribution Box: Designed for residential and commercial power distribution, typically rated from 12V to 240V with current capacities up to 100A. It is a switchgear-type box suitable for indoor or outdoor use.
Fiber Optic Distribution Box: Used for FTTX or fiber-to-device connections, often rectangular, compact, and designed to house fiber optic connectors, splitters, and adapters.
Energy Storage Cabinets: Larger cabinets integrating battery storage and smart management systems, often used in solar or backup power applications.
- Material and Build**
Made from high-quality stainless steel or cold-rolled steel, providing corrosion resistance and durability for indoor or outdoor environments. Compact, rectangular structure for space-saving installation, often with IP-rated protection for safety.
- Physical Features**
Low-voltage boxes: Typically wall-mounted or free-standing, with a secure enclosure, customizable dimensions, and color options. They include terminals for wiring, overload and short-circuit protection, and may have a transparent cover for monitoring.
Fiber optic boxes: Contain precision fiber interconnect assemblies, adapters, and splitters. They are usually smaller, with ports for fiber cables and may include labeling for easy identification.
Energy storage cabinets: Larger, often container-like, with integrated battery modules, monitoring systems, and ventilation for thermal management.
- Certification and Standards**
Look for CCC, CE, and ISO9001 certifications for safety and quality compliance. Fiber optic boxes may follow industry standards for optical connections and network integration.
- Wiring and T...**
