

Installation cost of home electrical distribution box

AI Overview

The typical cost to install a residential electrical distribution box ranges from \$600 to \$3,400, depending on amperage, location, and installation complexity.

Cost Overview For a standard 100–125 amp indoor panel, the total cost including the panel, breakers, wiring, labor, and permits usually falls between \$600 and \$1,500 for most residential projects, with labor being the most variable component. A 200 amp upgrade or outdoor installation can range from \$1,900 to \$3,400, and more complex setups with new meter sockets, smart meters, or extended wiring runs can reach \$4,500–\$6,000.

Factors Affecting Price

- Amperage Rating:** Higher amperage panels (200A vs 100A) require larger breakers, heavier wiring, and sometimes a new service disconnect, increasing costs.
- Panel Location:** Outdoor or hard-to-access locations may require weatherproof enclosures and additional labor, raising the price.
- Labor and Permits:** Electrician rates typically range from \$75–\$120 per hour, with total labor hours between 6–18 depending on project scope. Permit fees vary by region and can add 5–15% to the total cost.
- Wiring and Conduit:** Longer runs, rerouting, or replacement of old wiring can increase material and labor costs.
- Additional Features:** Smart monitoring, surge protection, or arc-fault breakers add to the upfront cost but improve safety and energy efficiency.

Typical Scenarios

- Basic Replacement:** 100A indoor panel, standard breakers, 6–8 hours of labor, total \$1,200–\$2,000 including permits.
- Mid-Range Upgrade:** 150–200A outdoor panel, new main disconnect, modest rewiring, total \$2,800–\$4,500.
- Premium Installation:** 200A outdoor panel with complex routing, multiple runs, smart meters, and enhanced surge protection, total \$4,500–\$8,000.
