

KVM Switcher Hotkey 16

AI Overview

A 16-port KVM switch can be controlled via hotkeys, typically by invoking a hotkey mode (e.g., double Ctrl) followed by the port number to switch between connected computers. Hotkey Basics Hotkey switching allows you to control multiple computers from a single keyboard and mouse without pressing the physical buttons on the KVM switch. For a 16-port KVM switch, the process generally involves:

- Invoking Hotkey Mode:** Press a specific key sequence, often double-tapping the Ctrl key or another designated trigger key like Scroll Lock or Right-Ctrl.
- Selecting the Port:** After entering hotkey mode, press the number corresponding to the port (1–16) to switch to that computer.
- Optional Customization:** Some KVM switches allow you to assign a preferred hotkey (e.g., Caps Lock, Tab) for easier access.

Example Hotkey Sequence

For many 16-port HDMI KVM switches (like MT-VIKI models):

- Default Trigger:** Double-tap the Ctrl key or Scroll Lock.
- Switch to Port 1–16:** Press the number key corresponding to the desired port.
- Alternate Hotkey:** Some switches allow holding Ctrl + Alt + Shift and pressing [or] to enable or disable hotkey functionality.

Tips for Smooth Operation

- Keyboard Compatibility:** Use a standard 104-key keyboard for reliable hotkey recognition, especially if your keyboard lacks a Scroll Lock key.
- Passthrough Mode:** Keep Passthrough Mode enabled to ensure the keyboard functions correctly across all ports.
- Practice Hotkey Use:** Double-pressing a hotkey by mistake can switch PCs unexpectedly, so practice the sequence to avoid errors.
- Alternative Switching:** Besides hotkeys, you can use panel buttons, IR remote, or auto-switching modes for convenience.

Summary

Using hotkeys on a 16-port KVM switch provides a fast and efficient way to switch between multiple computers. The typical workflow is to invoke hotkey mode and then press the port number. Customization options allow you to assign a preferred key for hotkey activation, ensuring smooth operation without interfering with other keyboard shortcuts. This...
