

Low-noise solutions for energy management systems in Bangladesh

AI Overview

Natural, porous materials and optimized EMS designs can significantly reduce noise in Bangladesh's energy sector while enhancing sustainability and efficiency. Natural Noise Mitigation Recent research in Bangladesh highlights the use of natural, porous materials for industrial noise reduction. These materials demonstrate high sound absorption coefficients (SAC) at low and mid frequencies, making them effective for power plants, refineries, and other energy facilities. They are eco-friendly, emit almost zero greenhouse gases, and can be combined in various configurations to maximize sound absorption. Additionally, galvanized steel pipes can serve as cost-effective impedance tubes for measuring noise, enabling industries to monitor and mitigate sound pollution affordably (Mahmudul, 2026).

Energy Management Systems (EMS) with Noise Considerations Modern EMS in Bangladesh are not only designed to optimize energy usage but can also contribute to low-noise operations. Key features include:

- Monitoring and Analytics:** Real-time tracking of energy consumption allows identification of high-noise equipment and operational inefficiencies, enabling targeted interventions (Logicspower, 2026).
- Control Systems:** Automated load management, inverter control, and idle machinery shutdown reduce unnecessary operational noise while improving energy efficiency.
- Integration with Renewable Energy:** EMS can coordinate hybrid systems (solar PV, wind, biogas, battery storage) to optimize energy flow and reduce reliance on noisy backup generators, particularly in rural microgrids (Frontiers in Energy Research, 2025).

Sustainable and Cost-Effective Implementation Bangladesh's energy sector can adopt low-noise EMS solutions by combining:

- Natural sound-absorbing barriers in industrial facilities.
- Smart EMS platforms that optimize energy use and reduce mechanical noise.
- Hybrid renew...
