

Malta Fiber-to-the-Home Indoor Optical Cable

AI Overview

Indoor fiber optic cables in Malta deliver high-speed, reliable internet directly to homes, supporting speeds up to 1000Mbps with minimal signal loss. Overview of FTTH in Malta

Fiber-to-the-Home (FTTH) refers to the deployment of fiber optic cables directly from a central office to individual residences, replacing traditional copper or coaxial lines for the “last mile” connection . In Malta, providers like GO offer FTTH services that deliver ultra-fast internet up to 1000Mbps, low latency, and stable connections suitable for streaming, gaming, and smart home devices . FTTH also supports triple-play services, including internet, TV, and phone, over a single fiber connection .

Indoor Fiber Cable Types

Indoor optical cables are designed for installation inside buildings and differ from outdoor cables in flexibility, fire resistance, and ease of routing. Common types include :

- Tight-buffered cables:** Individual fibers are coated with a protective buffer, ideal for short-distance indoor runs and direct termination.
- Loose-tube cables:** Fibers are housed in a protective tube, suitable for longer indoor runs or areas with potential temperature variations.
- Microcables:** Compact and lightweight, often used in multi-dwelling units or complex indoor layouts. These cables are typically installed in walls, ceilings, or conduits, connecting the main distribution point to individual outlets or devices.

Benefits of Indoor Fiber Optics

- High speed and bandwidth:** Fiber supports much higher data rates than copper, enabling multiple devices to operate simultaneously without slowdowns .
- Longer reach:** Single-mode fiber can transmit data over distances up to 25 miles without significant signal loss, compared to copper's 100 meters .
- Low attenuation:** Fiber experiences minimal signal degradation, ensuring consistent performance throughout the home .
- Future-proof:** FTTH infrastru...
