

Polymer Channel Cable Tray

Overview

Polymer cable trays are lightweight, durable systems crafted from plastic to manage and support electrical cables. They're designed to be highly resistant to corrosion, UV radiation, and various chemicals, making them ideal for protecting cables in challenging environments. Our Perforated Cable Trays are used extensively in Building, Water Power Industrial Sector, Mall, Railway Station, Metro Station, Airport etc. With a projected compound annual growth rate (CAGR) of 6.8% from 2024 to 2030, the market is expanding. In the realm of electrical equipment and supplies, polymer cable tray play a crucial role in ensuring organized and efficient cable management. These structures, typically made from materials such as steel, aluminum, or fiberglass, are designed to support and protect cables, wires, and other. These decisions are relatively simple and can be condensed down to four steps. Material choice T&B channel tray systems are fabricated from a corrosion-resistant metal (low-carbon steel, stainless steel or an aluminum alloy) or from a metal with a corrosion-resistant finish (zinc or epoxy).
