

Price of Parallel Angle Cable Trays

AI Overview

The price of Parallel Angle Cable Trays typically ranges from \$20 to \$100 per meter, depending on material, size, and supplier.

Overview Parallel Angle Cable Trays are a type of steel or aluminum cable tray designed to support and organize electrical cables in industrial, commercial, or construction settings. They are often used for heavy-duty applications where durability, load capacity, and ventilation are important. Materials commonly include hot-dip galvanized steel, stainless steel, or aluminum, with finishes that resist corrosion and meet international standards like DIN EN 61537.

Factors Affecting Price

- Material:** Stainless steel trays are more expensive than galvanized steel or aluminum due to corrosion resistance and longevity.
- Size and Width:** Wider trays (e.g., 150mm–300mm) cost more than narrower ones (50mm–100mm) because of increased material usage.
- Load Capacity:** Trays designed for heavy power cables or industrial loads are priced higher.
- Supplier and Region:** Prices vary by supplier and shipping location. European suppliers like Ekabel24 or Rexel may have different pricing compared to UK suppliers like CEF.

Typical Price Range

- Small, light-duty trays (50–100mm width): \$20–\$40 per meter
- Medium-duty trays (150mm width): \$40–\$70 per meter
- Heavy-duty trays (300mm width or stainless steel): \$70–\$100+ per meter

Additional Costs

- Accessories:** Bends, tees, risers, and brackets are sold separately and can add 10–30% to the total cost.
- Installation:** Labor and mounting hardware may significantly affect the overall project cost.

Recommendation For accurate pricing, it is best to request a quote from suppliers such as Ekabel24, CEF, Rexel, or McMaster-Carr, specifying the material, width, length, and load requirements. This ensures the price reflects your exact project needs and any regional shipping or regulatory considerations.
