

# Price of four-core civilian optical fiber cable

## Overview

Specs: 500 ft SMF with simple indoor routing; no conduit; standard connectors. Total project estimate: about \$1,000-\$1,600 including labor and basic terminations. A 4 core fiber optic cable contains four individual optical fibers—typically two for transmitting and two for receiving data—encased within a protective sheath. This configuration supports duplex communication and provides redundancy, making it suitable for both single-mode and multimode. Fiber-optic cable materials typically cost \$1 to \$6 per linear foot, depending on fiber count and cable type. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. Single-mode fiber costs less per foot than multimode fiber, but it requires more. When evaluating the cost and performance of fiber optic infrastructure, one component that frequently draws attention is the 4 core optical fiber cable. This guide presents ranges in USD and practical price estimates to help.
