

Price of main line connector for distribution box

AI Overview

The price of a main line connector for a distribution box typically ranges from \$10 to \$50 for standard DIN rail terminal blocks, with higher-current or specialized connectors costing \$50 to \$200 or more.

Overview Main line connectors for distribution boxes are usually terminal blocks or power connectors designed to handle the primary incoming power. They are available in various current ratings, typically from 10A to 125A for standard residential or commercial applications, and up to 1,000A or more for industrial or generator connections. Materials often include copper terminals with flame-retardant housings, and many are designed for DIN rail mounting for easy installation.

Price Ranges Standard DIN rail terminal blocks (10-125A): \$10-\$50 per unit, depending on brand and features like transparent covers or modular design. High-current connectors (200-1,000A, industrial grade): \$50-\$200+, often used in LV distribution panels or generator connections. Specialized connectors (IP68-rated, multi-pole, or hybrid signal/power connectors): \$100-\$500, designed for harsh environments or renewable energy systems.

Factors Affecting Price Current rating - Higher amperage connectors require larger contacts and insulation, increasing cost. Material quality - Copper or silver-plated contacts are more expensive than standard brass. Environmental protection - Waterproof or dustproof connectors (IP65-IP68) cost more. Brand and certification - UL, CSA, or VDE-approved connectors may carry a premium. Additional features - Transparent covers, modularity, or push-in termination can increase price.

Where to Buy Amazon: Offers DIN rail terminal blocks and distribution boxes for \$10-\$50. Industrial suppliers: DirectIndustry and McMaster-Carr provide high-current and specialized connectors, with prices varying by specification. Electronics distributors: RS Components stocks...
