

Price requirements for a three-level electrical distribution box on a construction site

AI Overview

The price of a three-level electrical distribution box for construction sites typically ranges from \$200 to \$800, depending on specifications, amperage, material, and customization.

Factors Affecting Price

- Rated Current and Amperage:** The main switch rating (e.g., 63A, 100A) directly affects cost. Higher amperage boxes are more expensive due to larger components and copper wiring capacity.
- Material and Build Quality:** Boxes made of stainless steel or robust sheet steel are more durable and weather-resistant, which increases the price compared to basic thermoplastic enclosures.
- Number of Circuits and Sockets:** Additional industrial sockets, waterproof outlets, or terminal blocks increase cost. Pre-wired boxes with multiple circuits are more expensive than basic models.
- Customization and Safety Features:** Features like built-in circuit breakers, energy meters, IP65/IP67 protection, and compliance with IEC standards can raise the price.
- Installation and Delivery:** Some suppliers include shipping and installation in the price, while others charge separately. Bulk orders may qualify for discounts.

Typical Price Range

- Basic three-level distribution box: \$200–\$350, suitable for small tools and temporary lighting.
- Mid-range box with multiple sockets and moderate amperage (63–100A): \$350–\$600, suitable for small machinery and floor-level power distribution.
- High-end or fully customized box: \$600–\$800+, including stainless steel construction, advanced monitoring, and multiple circuit breakers.

Applications

These boxes are commonly used for:

- Powering handheld tools and small machinery on-site
- Temporary lighting in foundation pits or corridors
- Localized power distribution near equipment to reduce line loss and improve safety
