

Ribbon pigtails and bundled pigtails

Overview

Aside from these standard types, there are also bundled and ribbon pigtails, both serving as branchable options. They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. By combining factory-installed connectors with spliced bare fiber, pigtails ensure that network installers can create. Fiber pigtails, often referred to simply as pigtails, consist of one end with a connector and the other end with the exposed fiber optic cable. Pigtails connect optical fibers to network components, while ribbon fiber cable organizes multiple fibers within a single structure, enhancing space efficiency and connectivity. Discover the perfect pigtail for your network infrastructure.
