

Selection Guide for Broadcast-Grade ONU Optical Network Unit QSFP

Overview

This guide breaks down NS-branded QSFP28 modules—SR4, LR4, and DR—with practical advice on reach, fiber types, connectors, power, DOM, interoperability, and lifecycle management. A practical, engineer-friendly guide to choosing the right transceiver form factor by speed, port density, power, migration plan, and operational risk—built for 25G/100G networks in 2026. The Basics: These. Use Case: In 2026, SFPs are primarily used for out-of-band management ports and legacy 1G fiber links. While functional, they are considered outdated for high-speed data traffic. SFP+ is the default choice for 10G server uplinks and. The original SFP standard (SFF-8472) supports up to 1 Gbps. SFP modules are used for 1 Gigabit Ethernet, 1G/2G/4G Fibre Channel, and SONET/SDH. A standard GPON SFP ONU stick uses the SFP form factor but operates as an ONU, not a standard Ethernet. An engineer-focused, “just tell me what to choose” guide to transceiver selection with architecture, power budget, compatibility, and upgrade plan — designed for 25G/100G today and 400G/800G tomorrow. 25G is the new 10G; 100G (QSFP28) is the workhorse; design for migration plans to 400G/800G. Misunderstanding the differences between SFP, SFP+, SFP28, QSFP, and QSFP28 modules can lead to link instability, performance bottlenecks, and expensive hardware mismatches.
