

Setting up a router connected to a China Telecom fiber optic cable

AI Overview

To set up a China Telecom fiber optic router, connect the fiber cable to the ONT, link the ONT to your router via Ethernet, then configure the router through its admin interface using the provided credentials.

Step 1: Prepare Your Equipment

- Fiber optic modem (ONT):** Provided by China Telecom to convert the fiber signal into data your devices can use.
- Router:** Ensure it supports fiber input (WAN port or SFP port).
- Fiber optic cable:** Usually yellow with SC/APC or SC/UPC connectors.
- Ethernet cable:** To connect the ONT to the router.
- Power adapters:** For both ONT and router.

Step 2: Connect the Fiber Optic Line

Locate the fiber wall outlet where China Telecom's fiber enters your home. Plug the fiber optic cable into the ONT's designated port. Power on the ONT and wait 2-5 minutes for the status lights to stabilize.

Step 3: Connect the ONT to the Router

Use an Ethernet cable to connect the ONT's LAN port to the router's WAN port. Power on the router and wait for the indicator lights to confirm a successful connection.

Step 4: Access the Router Admin Interface

Connect your computer or mobile device to the router via Ethernet or Wi-Fi. Open a web browser and enter the router's IP address, usually 192.168.1.1 or 192.168.0.1. Enter the admin username and password (default is often admin/admin or admin/password if not changed).

Step 5: Configure Internet Settings

Navigate to the WAN settings section. Select PPPoE if required and enter the username and password provided by China Telecom. Save the settings and ensure the router shows an active internet connection.

Step 6: Set Up Wi-Fi

Go to the Wi-Fi settings section. Set your SSID (network name) and Wi-Fi password. Save changes and reconnect your devices to the new Wi-Fi network.

Step 7: Optimize Your Fiber Connection

Use wired connections for critical devices to maximize speed and reduce latency. Update firmware on both the ONT and router f...
