

TP Aggregation Switch

Overview

Equipped with all-fiber ports, Aggregation Series Switches deliver up to 25 Gbps. With features such as Static Routing, DHCP Server, ACL, IGMP Snooping, STP, LAG, and centralized cloud management, they offer a robust and reliable solution for the aggregation layer of SMB. LAG is short for link aggregation group, including static LAG and LACP (Link Aggregation Control Protocol) two achievement mechanisms. Select models. Introduction: Some TP-Link Wi-Fi products have the Link Aggregation function which can aggregate two LAN ports together at most in order to get a higher LAN speeds up to 2Gbps theoretically. TAP aggregation switches link. This section describes Test Access Point (TAP) aggregation and the data structures that it requires.
