

Various power distribution box symbols

AI Overview

Power distribution box symbols represent electrical components like breakers, meters, transformers, and switches in diagrams, ensuring clear communication and safe installation.

Overview of Distribution Box Symbols

Power distribution box symbols are graphical icons used in electrical schematics and single-line diagrams to represent equipment inside distribution boards or switchboards. These symbols help engineers, electricians, and designers understand how power flows and how devices are interconnected.

Common Symbols in Distribution Panels

Circuit Breakers: Represented by a rectangle or square with a line or arc indicating the type (single-pole, double-pole, or three-pole). They show where protection is provided and which loads can be isolated.

Fused Switches: Symbols often include a line with a small circle or triangle to indicate a fuse, showing overcurrent protection.

Transformers: Depicted as two coils or a pair of parallel lines with a core symbol, indicating voltage conversion within the panel.

Meters: Power meters, ammeters, or voltmeters are shown as circles with letters (e.g., "V" for voltmeter, "A" for ammeter) to indicate measurement points.

Capacitor Banks: Represented by parallel lines or a combination of lines and arcs, used for power factor correction.

Automatic Transfer Switches (ATS): Shown as a switch symbol with a connection to a backup generator, indicating automatic power source switching.

Control Devices: Selector switches, push buttons, and relays are represented by standardized symbols, often with letters or small geometric shapes to indicate function.

Power System Symbols for Outlets and Switches

In addition to panel components, power system symbols include representations for:

- Single and duplex sockets:** Circles with one or two lines, sometimes annotated with amperage or special features like GFCI or UPS-fed.
- Isolating switches:** Shown as a line intersecting a circle or rectangle, indicating manual disconnection points.
- Motor Control Centers (MCC):** Rectangles with internal...
