

Waterproof power distribution box for water pumps

AI Overview

IP65-IP68 waterproof power distribution boxes provide reliable protection for water pumps in outdoor and industrial environments. Key Features

- Ingress Protection (IP) Rating:** Look for boxes rated IP65 to IP68, which ensure protection against dust, rain, and water splashes, making them suitable for outdoor pump installations and humid environments (SinoBreaker, ETEK Electrical, GEYA).
- Material and Durability:** Most waterproof distribution boxes are made from UV-resistant PC or ABS plastics, offering impact resistance, corrosion protection, and long-term durability under sun exposure or harsh weather conditions (SELHOT, GEYA).
- Design and Installation:** Options include DIN rail-mounted enclosures for modular wiring, transparent covers for easy inspection, and push-to-open doors for convenient maintenance. Cable entry points and conduit support allow flexible wiring for pumps and other electrical components (SinoBreaker, GEYA).
- Customization:** Many manufacturers offer custom sizing, knockouts, and internal layouts to accommodate multiple circuits, terminals, or specialized pump control systems. This is useful for industrial or agricultural irrigation setups where multiple pumps or sensors are integrated (SELHOT, ZCEBOX).
- Applications:** These boxes are widely used for water pumps, irrigation systems, solar power systems, outdoor lighting, and industrial machinery, ensuring safe and continuous operation even in wet or dusty conditions (SELHOT, SinoBreaker, GEYA).
- Safety and Compliance:** Ensure the box meets IEC standards (IEC60529, IEC62262) and has flame-retardant properties to prevent electrical hazards. Plastic insulation reduces the risk of electric shock, and IP-rated sealing prevents water ingress that could damage pump circuits (ETEK Electrical, GEYA).
- Recommended Series**
 - AT Series (SinoBreaker):** Compact, value-focused, ideal for tight spaces and simple pump wiring.
