

What are the different types of large square fiber optic cable connectors

Overview

A variety of optical fiber connectors are available, but SC and LC connectors are the most common types of connectors on the market. Known for its square shape and push-pull coupling, SC is widely used in FTTH (Fiber to the Home) deployments and data. This article explores the wide range of fiber optic connector types, from legacy SC and ST to modern MPO/MTP and VSFF designs. Fiber optic connectors may look small. The fiber connector types, sometimes referred to as terminations, link fiber optic cables together through terminals, switches, adapters, and patch panels, by bridging the gap between their internal glass fibers that transmit the data down the length of the cable. The images below show the details of a typical SC connector. Each type is optimized for specific uses and includes features suitable for different devices. We'll also provide practical advice.
