

What should be noted when converting optical modules

Overview

How do I ensure that two optical modules are interoperable?

When it comes to the connection between two fiber optic transceivers, the following four factors should be considered: wavelength, speed, fiber type, and connection to the switch. 1, Same wavelength In a fiber optic link, data is transmitted from. The optical module serves as a crucial component in optical fiber communication systems, operating at the physical layer, which is the lowest layer in the OSI model. Its primary function is to achieve optoelectronic conversion by converting electrical signals into optical signals and vice versa. In today's crowded OEM-compatible transceiver market, it is important to choose wisely.
