What to do if there is AI on the server

Overview

This post focuses on AWS WAF as the frontline defense to observe and manage AI bot activity against your application. Complete guide with user-agent strings, IP verification, and practical monitoring strategies. Last modified on Jan 3, 2026 at 3:24 am The landscape of web traffic has. With experience in IT and AI, I've witnessed the challenges of server administration—repetitive tasks, human errors, and critical downtime that can disrupt business operations. Today, AI agents offer a transformative solution, automating server management, reducing errors, and integrating. We're going to use two built-in tools to help us monitor AI use in our network. Both of these are included in the Microsoft 365 Business Premium license. How do permissions for data access get granted to AI?

Via OAuth. Leverage logging and analytics to attribute bot traffic to specific actors like OpenAI and Meta for targeted blocking.
