

Xiaomi Router 3 supports 200Mbps fiber optic internet

AI Overview

The Xiaomi Mi WiFi Router 3 cannot fully utilize a 200Mbps fiber optic connection due to its 100Mbps WAN and LAN ports. Router Specifications The Xiaomi Mi WiFi Router 3 is a dual-band 802.11ac router with theoretical maximum Wi-Fi speeds of 300 Mbps on the 2.4 GHz band and 867 Mbps on the 5 GHz band . It has four external antennas for improved coverage and signal strength . However, the router's WAN port and Ethernet LAN ports are limited to 100 Mbps, which is a critical factor for fiber connections exceeding this speed . Real-World Performance In practical tests, the router performs well on the 2.4 GHz band for basic internet usage and close-range connections, but the 5 GHz band can experience significant speed drops at longer distances, affecting high-bandwidth activities like HD streaming or online gaming . Reviews note that while the router is suitable for small households with moderate device usage, it cannot deliver full 200Mbps speeds over wired connections due to the 100 Mbps Ethernet limitation . Conclusion While the Xiaomi Mi WiFi Router 3 can handle internet browsing, streaming, and light gaming, it cannot fully support a 200Mbps fiber optic connection. To achieve the full speed of 200Mbps, a router with Gigabit WAN and LAN ports is required. For users with high-speed fiber, upgrading to a newer Xiaomi model like the Xiaomi Router AX3000T, which supports Wi-Fi 6 and higher throughput, would be a better choice .
